

Internship

I was interviewed based on my interest in developing skills using AutoCAD. Fortunately, I was hired as the Cable Engineering/AutoCAD intern last summer. After my experience, I realized how important and successful an internship is in the development of ones career. I have been in school for several years, both here and in my country of Cape Verde, but I never felt confident in my abilities until after I completed this internship. During this internship, I became acquainted with OIT outside plant activities and all procedures performed in the field, and became proficient with AutoCAD drawings, paper files, electronic drawing files, etc. It brings me confidence; even though I have a lot to learn in my career, now I feel more a professional and very confident in the performance of my job. The attendance of this internship is one of the greatest things that have happened in my life; not only have I learned a lot , but I guess my boss was happy with my work, so she offered me a continuing position right after the internship ended!

Eventually, I would like to advise every student that internship is an indispensable tool in the development of one's career. It enables students to pursue their career goals and give them self-confidence by recognizing their professional achievements, and do not forget to impress your boss with a great job....
